Collie River HDD Crossing

BUNBURY, WA, AUSTRALIA

McConnell Dowell successfully completed a crossing at Collie River, Western Australia involving a 350m of 630mm (25") HDPE for the WA Water Corporation.

A compound bend had to be drilled so that the pipe-string was positioned parallel to the river in order for pull back to be possible.

This crossing was executed using McConnell Dowell's American Augers DD625. The pilot hole was 312mm (12 1/4") and the borehole had to be enlarged with barrel reamers to 915mm (36"). Pull back was successfully completed in one day
